## Summary

Full Stack Developer with 1+ years of experience building and maintaining production web applications using MERN stack and AWS cloud services. Proven ability to deliver scalable systems handling high traffic volumes, optimize application performance, and implement secure authentication solutions. Strong focus on writing clean, maintainable code with comprehensive testing and documentation.

Core Competencies: Full Stack Development | Serverless Architecture | Cloud & DevOps (AWS) | Database Design & Optimization | Authentication & Security | RESTful APIs | Agile Methodologies | Performance Optimization

## Education

Zagazig University

Zagazig, Sharkia, Egypt

Bachelor of Computer Engineering Faculty of Engineering

09/2018 - 06/2022

## Experience

### Full Stack Developer (Freelance) Vouchcom Limited | Remote (London, UK) | (May 2025 – Present)

- Architected and implemented full-stack application using React.js frontend, Node.js/Express backend, MongoDB database, and AWS serverless infrastructure (Lambda, API Gateway, S3, Cognito)
- Built scalable REST APIs processing 10,000+ requests daily with comprehensive validation, error handling, and logging
- Designed and implemented secure authentication system supporting 500+ concurrent users using JWT and AWS Cognito
- Developed automated PDF generation pipeline with headless Chrome, S3 storage integration, and scheduled cleanup processes
- Improved PDF generation performance by 40% through pipeline optimization and caching strategies
- Optimized database queries and schema design, reducing API response times from 800ms to 120ms
- Integrated OpenAI API for AI-assisted content generation (skills suggestions, summary improvements)
- Implemented comprehensive observability solution with structured logging, CloudWatch metrics, and automated alerting
- Established CI/CD pipeline reducing deployment time from 3 hours to 10 minutes
- Collaborated with stakeholders to gather requirements, provide technical estimates, and deliver features on schedule
- Maintained high code quality through unit testing (Jest), code reviews, and technical documentation

## Projects

### • Portfolio

[Github](#) | [demo](#)

01/2023 - 06/2023

- Developed personal portfolio website using React.js and Tailwind CSS to showcase technical skills and projects with responsive design and clean UI/UX for professional presentation.

### • E-Commerce Platform

[Github](#) | [demo](#)

03/2023 - 08/2023

- Built comprehensive e-commerce application with React.js frontend and Node.js backend featuring user authentication, role-based authorization system, shopping cart functionality, admin dashboard for product/order management, and secure payment processing integration.

### • Disney Clone

[Github](#) | [demo](#)

07/2021 - 09/2021

- Built disney clone platform using React.js with fully responsive design and Google OAuth authentication, implementing dynamic content rendering and modern UI components for seamless user experience.

### • Amazon Clone

[Github](#) | [demo](#)

06/2022 - 07/2022

- Created e-commerce platform clone using React.js and Redux for state management with Firebase integration, implementing shopping cart functionality, user authentication, and real-time database synchronization.

## Skills

- Frontend** : HTML5, CSS3, Tailwind CSS, JavaScript (ES6+), React.js, Next.js, Redux, TypeScript, Jest, Responsive Design
- Backend** : Node.js, Express.js, MongoDB, Firebase, RESTful APIs, MySQL, Supabase, PostgreSQL, JWT Authentication, Server-side Rendering
- Cloud & DevOps**: AWS Lambda, API Gateway, Cognito (Auth & OpenID Connect), S3, SES, Secrets Manager, MongoDB Atlas (serverless), EventBridge, SQS, SNS, Serverless Architecture, CloudWatch
- Version Control & Methodologies**: Git, GitHub, Vercel, Netlify, Postman, npm, Unit Testing
- Methodologies & Practices** : Agile Development, Problem-solving, Team Collaboration, Clear Communication, Attention to Detail
